Well that's a great idea too. Bring it!

Haven't you heard? There's a drought going on. Just the other day some dork told us to turn down the run times. Actually we want to kill off the turf in that corner and replace with rocks or wood chips.

Mike,

On the northwest corner of CCP where the turf is closest to Dale Evans, we might want to increase that area's watering time some. It seems to be turning yellow there. As you know, the prevailing wind comes across DEP and then over that section of turf first. The prevailing condition tends to blow irrigation water away from that area more than others, so it might be advisable to allow that particular station to run slightly longer than what the remaining stations are set for to compensate for the wind drying that area so quickly? Just a thought.
